

ITA0502-COMPUTER VISION

LAB EXPERIMENT-10

10. Perform moving of an image from one place to another.

CODE:

```
import cv2
import numpy as np

# Read image
img = cv2.imread("flower.png")

# Get image size
rows, cols = img.shape[:2]
# Create transformation matrix
matrix = np.float32([
    [1, 0, 100],
    [0, 1, 50]
])
# Move image
moved = cv2.warpAffine(img, matrix, (cols, rows))
# Display images
cv2.imshow("Original Image", img)
cv2.imshow("Moved Image", moved)
cv2.waitKey(0)
cv2.destroyAllWindows()
```

OUTPUT:
