LAB EXPERIMENT-3

3. Perform basic Image Handling and processing operations on the image

- Read an image in python and Convert an Image to show outline using Canny function.

CODE:

```
import cv2

# Read the image
img = cv2.imread("outline.png")

# Convert image to grayscale
gray = cv2.cvtColor(img, cv2.COLOR_BGR2GRAY)

# Detect edges using Canny
edges = cv2.Canny(gray, 100, 200)

# Display original image
cv2.imshow("Original Image", img)

# Display edge image
cv2.imshow("Canny Edge Detection", edges)

cv2.waitKey(0)
cv2.destroyAllWindows()
```

OUTPUT:
