

## ITA 0502- COMPUTER VISION

### LAB EXPERIMENT-11

#### 11. Perform Affine Transformation on the image.

##### CODING:

```
import cv2
import numpy as np

# Read the image
img = cv2.imread("flower.png")

# Check if image is loaded
if img is None:
    print("Error: Image not found!")
    exit()

rows, cols = img.shape[:2]

# Three source points
pts1 = np.float32([[50, 50],
                   [200, 50],
                   [50, 200]])

# Three destination points
pts2 = np.float32([[10, 100],
                   [200, 50],
                   [100, 250]])

# Create affine transformation matrix
M = cv2.getAffineTransform(pts1, pts2)

# Apply affine transformation
result = cv2.warpAffine(img, M, (cols, rows))
```

```
# Display images
cv2.imshow("Original Image", img)
cv2.imshow("Affine Transformation", result)

cv2.waitKey(0)
cv2.destroyAllWindows()
```

## OUTPUT:
